

CYBERNEXUS Ω

SECURITY INCIDENT REPORT

Incident ID	CNX-REPORT-TEST-001
Risk Score	57/100
Risk Level	HIGH
Generated UTC	2026-09-30T14:08:57.843916+00:00
Engine	CyberNexus Security Report Generator

CONFIDENTIAL

1. Executive Summary

CyberNexus Ω analyzed security telemetry associated with incident **CNX-REPORT-TEST-001**. The consolidated assessment produced a risk score of **57/100** with a risk level of **HIGH**. The available evidence and analytical results were correlated to support defensive investigation and response planning.

Classification: Security Incident

2. Risk Assessment

Security Signal	Risk Score	Risk Level
URL	55	HIGH
FILE	40	MEDIUM
EMAIL	64	HIGH
OVERALL	57	HIGH

- URL detector reported HIGH risk with score 55.
- File detector reported MEDIUM risk with score 40.
- Email detector reported HIGH risk with score 64.

3. Threat Findings

- IP address used instead of domain name
- Suspicious keywords: login, verify, password
- Suspicious execution-related patterns detected
- Urgency indicators detected
- Sensitive-data indicators detected
- 1 URL(s) detected
- URL shortener detected: bit.ly

4. Indicators of Compromise

URLS

- http://192.168.1.20/login/verify/password
- https://bit.ly/example

DOMAINS

- bit.ly

IP_ADDRESSES

- 192.168.1.20

FILE_HASHES

- eaf3695cb93a4b4da830cbc0a1d52f118eee11d0c43a972a951489dc257b1646

EMAIL_ADDRESSES

- security@example.com

5. Attack DNA Analysis

DNA Pattern: PHISHING_CREDENTIAL_ATTACK

Classification: CREDENTIAL_ATTACK

Confidence: 92%

Risk Score: 100

Attack Chain

- INITIAL_ACCESS
- CREDENTIAL_ACCESS
- EXECUTION
- PRIVILEGE_ESCALATION
- COMMAND_AND_CONTROL
- DISCOVERY
- DATA_EXFILTRATION

6. Anomaly Analysis

Anomaly Score: 100

Risk Level: CRITICAL

Summary: CyberNexus detected multiple abnormal behaviour metrics.

Detected Indicators

- Excessive failed login activity.
- Privilege escalation behaviour detected.
- Unknown device activity detected.
- Suspicious URL activity detected.
- Large outbound data transfer detected.

7. Digital Forensics & Evidence

Forensic analysis information available.

SHA-256: eaf3695cb93a4b4da830cbc0a1d52f118eee11d0c43a972a951489dc257b1646

Forensic Risk: 40 (MEDIUM)

Evidence Records: 3

- Event ID: EVT-REPORT-001
- Evidence Hash: abc123
- Ledger Hash: def456
- Event ID: EVT-REPORT-002
- Evidence Hash: ghi789
- Ledger Hash: jkl012
- Event ID: EVT-REPORT-003

- Evidence Hash: mno345
- Ledger Hash: pqr678

8. Knowledge Graph

Nodes: 6

Relationships: 6

Key Relationships

- INCIDENT → [CONTAINS] → URL
- URL → [RESOLVES_TO] → DOMAIN
- EMAIL → [SUSPICIOUS_LINK] → URL

9. Defensive Response Plan

Containment

- Isolate affected systems.
- Block confirmed malicious indicators.
- Preserve relevant evidence.

Investigation

- Review the complete incident timeline.
- Correlate endpoint and network telemetry.
- Investigate authentication activity.

Recovery

- Restore systems only after security validation.
- Rotate potentially exposed credentials.

Monitoring

- Increase monitoring for recurrence.
- Monitor identified indicators.

Response Priority: IMMEDIATE

10. Security Simulation

Initial Risk: 93 (CRITICAL)

Final Risk: 52 (HIGH)

Risk Reduction: 41 points (44.09%)

Outcome: Defensive response reduced the simulated incident risk.

11. Security Recommendations

- Investigate the suspected initial access vector.
- Review authentication activity.
- Investigate suspicious files.
- Review privileged account activity.

- Investigate outbound data transfers.
- Investigate identified URLs.
- Review identified domains.
- Review IP-based indicators.
- Compare identified file hashes with trusted records.

12. Conclusion

CyberNexus Ω completed a consolidated defensive security assessment with an overall risk score of **57/100** and risk level **HIGH**. The report combines available detection, intelligence, forensic, correlation, graph, simulation, and response information into a single investigation artifact.
